NATURAL HYDRA-GYP FLOCCULANT

PRODUCT DESCRIPTION:

HYDRA-GYP is a technical grade concentrated liquid suspension that contains 80% w/v of super fine milled Natural Gypsum, applied for the treatment of flocculating water. The average particle size is only 20 microns which greatly enhances the effectiveness of **HYDRA-GYP** compared to course particles contained in bulk gypsum.

MAJOR ADVANTAGES OF HYDRA-GYP:

- **HYDRA-GYP** is much easier to handle and apply, with no dust problems and instant results.
- **HYDRA-GYP** requires no agitation during transport or storage.
- **HYDRA-GYP** offers reduced labour cost with minimal OH&S concerns.

WATER APPLICATION RATES:

HYDRA-GYP should be applied at the rate of 50-70 litres of product to 1,000,000 litres of water for optimum results. Pre-dilute **HYDRA-GYP** with water first, 1 part product to 1 part water into a spray or application tank and keep agitated. Then apply with a hand held spray gun/nozzle. Do not leave diluted mix in the tank as **HYDRA-GYP** will settle to the bottom.

SOIL APPLICATION RATES:

HYDRA-GYP may also be applied to hard clay soils to improve the soil structure and friability to increase water infiltration, root growth and mass. For all soil applications **HYDRA-GYP** should be applied at the rate of 75 to 150 L/ha.
