

# ULTIMATE INDUSTRIAL SOLUTIONS

## FOR

### CIVIL WORKS, REVEGETATION, WATER TREATMENT AND SURFACE COATINGS

#### COMPANY PROFILE

Ultimate Industrial has been supplying the Civil Industry with its water treatment products since 2003. As a National supplier to the industry we continue our commitment in providing cost effective technical solutions for industrial applications. Our industry knowledge and product portfolio continues to grow as we expand our operation.

## PRODUCT OVERVIEW

**HYDRA-GYP** is a technical grade concentrated liquid suspension that contains 80% w/v of superfine natural Gypsum applied for the treatment of flocculating water in the following uses: Roadside Water Storages, Industrial Waste Water, Farm Dams and Potable Water. Flocculating water is a common treatment within industrial waste water and water holdings, most flocculating products currently on the market are chemically based and may not be biodegradable, unlike HYDRA-GYP.

**TRIPLE STRIKE** is a concentrated liquid suspension that is a one step treatment for algal blooms in water bodies. TRIPLE STRIKE doesn't kill the algae initially; its mode of action is to starve the algae of nutrients over a period of weeks and will prevent further algae blooms.

**FERTI-PAM** is a technical grade liquid formulation that will assist with water and moisture holding efficiency for revegetation projects. Research has shown that Polyacrylamides and Humates will increase water infiltration, moisture holding ability and reduce nutrient leaching caused by heavy rain. FERTI-PAM is a cost effective solution for all revegetation projects.

**PH-PLUS** is applied on revegetation sites to increase the soil pH and improve the availability of soil nutrients. PH-PLUS is a liquid suspension of technical grade Calcium Carbonate. PH-PLUS is also used to increase Calcium levels within the soil profile that leads to improved infiltration rates and soil structure.

**GYP-FLO** is also widely used on revegetation sites to assist with soil compaction whilst also enhancing the germination and development process. GYP-FLO is a "Patented" liquid suspension of technical grade Calcium and Sulphur which will also improve your soil structure by reducing Sodium build up and increasing Calcium levels within your soil profile and improving infiltration rates.

**DOLOMITE PLUS** is a liquid suspension of technical grade Calcium and Magnesium applied to prevent and improve acids soils by increasing the soil pH and Calcium/Magnesium levels in the soil. DOLOMITE PLUS will also increase the availability of soil nutrients and will improve infiltration rates.

**ULTRA HUMIC** is a concentrated natural liquid formulation of Humic and Fulvic acids that act as a powerful soil conditioner that will strongly promote good soil structure, root growth and improved nutrient uptake as well as stimulating the soils micros.

### INDUSTRIAL SURFACE COATINGS

**SOLACOAT** is a unique surface coating that is easily applied to office complexes, construction buildings, on-site portable work units, chemical storage units and general shed roofing. SOLACOAT will reflect up to 80% of the sun's rays and will also reduce the inside temperature by up to 20°C providing a huge reduction in energy costs and creating a more comfortable working environment.
