PRODUCT DESCRIPTION:

FERTI-PAM is a technical grade liquid formulation of Polyacrylamide (SOIL PAM) and Humic Acid. It can be applied via irrigation systems in Horticultural crops to optimise water infiltration and moisture holding ability. **FERTI-PAM** assists in the reduction of nutrient leaching and reduces water usage by increasing the effectiveness of water movement.

Polyacrylamides have been applied with great success in the Agricultural industry around the world for many years. However, from our research we have added Humic Acid to the formulation for its strong soil conditioning properties and ability to increase the effectiveness and movement of the polyacrylamides within the soil profile.

APPLICATION RATES:

CROP TYPE		COMMENTS
Vegetables		Apply after planting/sowing, repeat application after cultivating.
Fruit		Apply with 1st irrigation, two further applications during the season.
Grapevines		Apply with 1st irrigation, two further applications during the season.
Turf		Apply at spring break, repeat applications after cultivating.
Cereals		Apply at planting.
Cotton/Corn/Sorghum		Apply at planting, repeat application after 1st cultivation.

IRRIGATION TYPE	RATE L/ha	COMMENTS
Drip System	10-15	Apply during mid-irrigation.
Over head	20-30	Apply during mid-irrigation.
Flood	20-30	Apply via boom spray prior to irrigating.
