

**FIELD TRIAL—SEASON 07/08**

Crop: Autumn Raspberries (Victoria).  
 Planted: Early Nov 2007 (Tissue Culture).  
 Amino Mate: Applied 1 X 7 Litres/ Ha via drip.

The Raspberries in the treated area were harvested in the Autumn of 2008, the control area did not have enough fruit to warrant harvesting. The fruit that was harvested in the treated area covered the total cost of the tissue culture in it's first harvest.
